

## USER INSTRUCTIONS FOR PARASOL BASES

### SAFETY:

- This product is heavy. The parasol base must always be moved by a minimum of 2 adults.
- The handles that are attached to the bases, are intended for carefully moving the base; these handles may not, under any circumstances, be used to lift the bases.

### OPERATION

- Always move a parasol base with swivel wheels slowly across your terrace. If your terrace is uneven, we advise you to lift the parasol base over any irregularities instead of just pulling the parasol base over them.  
If you bump against these irregularities, the wheels underneath the parasol base can break off.
- Always apply all brakes on a parasol with swivel wheels in order to prevent it from rolling away.
- Always weigh down a cross-foot base using 4 tiles that are heavy enough for the parasol. Never use a cross-foot base without weighing it down as described above.
- Parasol bases must only be operated by adults.

### MAINTENANCE

- A stainless steel cleaner can be used to easily remove flash rust on stainless steel tubes.
- Granite can become discoloured after some time. You can restore the colour by using a granite colour intensifier. A colour intensifier impregnates, nourishes and protects the granite.
- We advise you to cover the parasol base or place it indoors during the autumn and winter.

### USE

- Platinum parasol bases are solely intended for private, non-commercial use.  
Defects caused by not adhering to our advice, improper use or lack of maintenance are not covered by the guarantee.
